Best for Avoiding Pet Poo

Why We Picked It

The iRobot Roomba j7+ might induce sticker shock, but it's one of the smartest standalone robot vacuums you can buy. It uses a built-in camera and machine learning technology to recognize obstacles in its cleaning path in real time, and automatically reroute itself around them. iRobot has trained its PrecisionVision Navigation machine learning algorithms to identify phone cords, power cables, headphones, pet waste, shoes, clothing, and towels on the floor using hundreds of millions of images crowdsourced from its customers who have opted in to contribute to its database.

When it encounters potential obstacles that aren't in its database, the j7+ snaps photos and asks you whether it should avoid those areas in the future. It only takes about a minute to review the obstacle images, and doing so can prove extremely useful. This method allows you to quickly and easily create Keep-Out Zones around areas that typically halt cheaper robot vacuums.

Aproveche la verdadera multinube

Agregue agilidad a sus datos

MULTIPLE CLOUDS

VS.

MULTI-CLOUD

Volumen de almacenamiento único conectado directamente a la nube o nubes

Sin movimiento de datos, lo que reduce los costos y elimina el retraso en la transferencia de datos

Interfaz de administración única

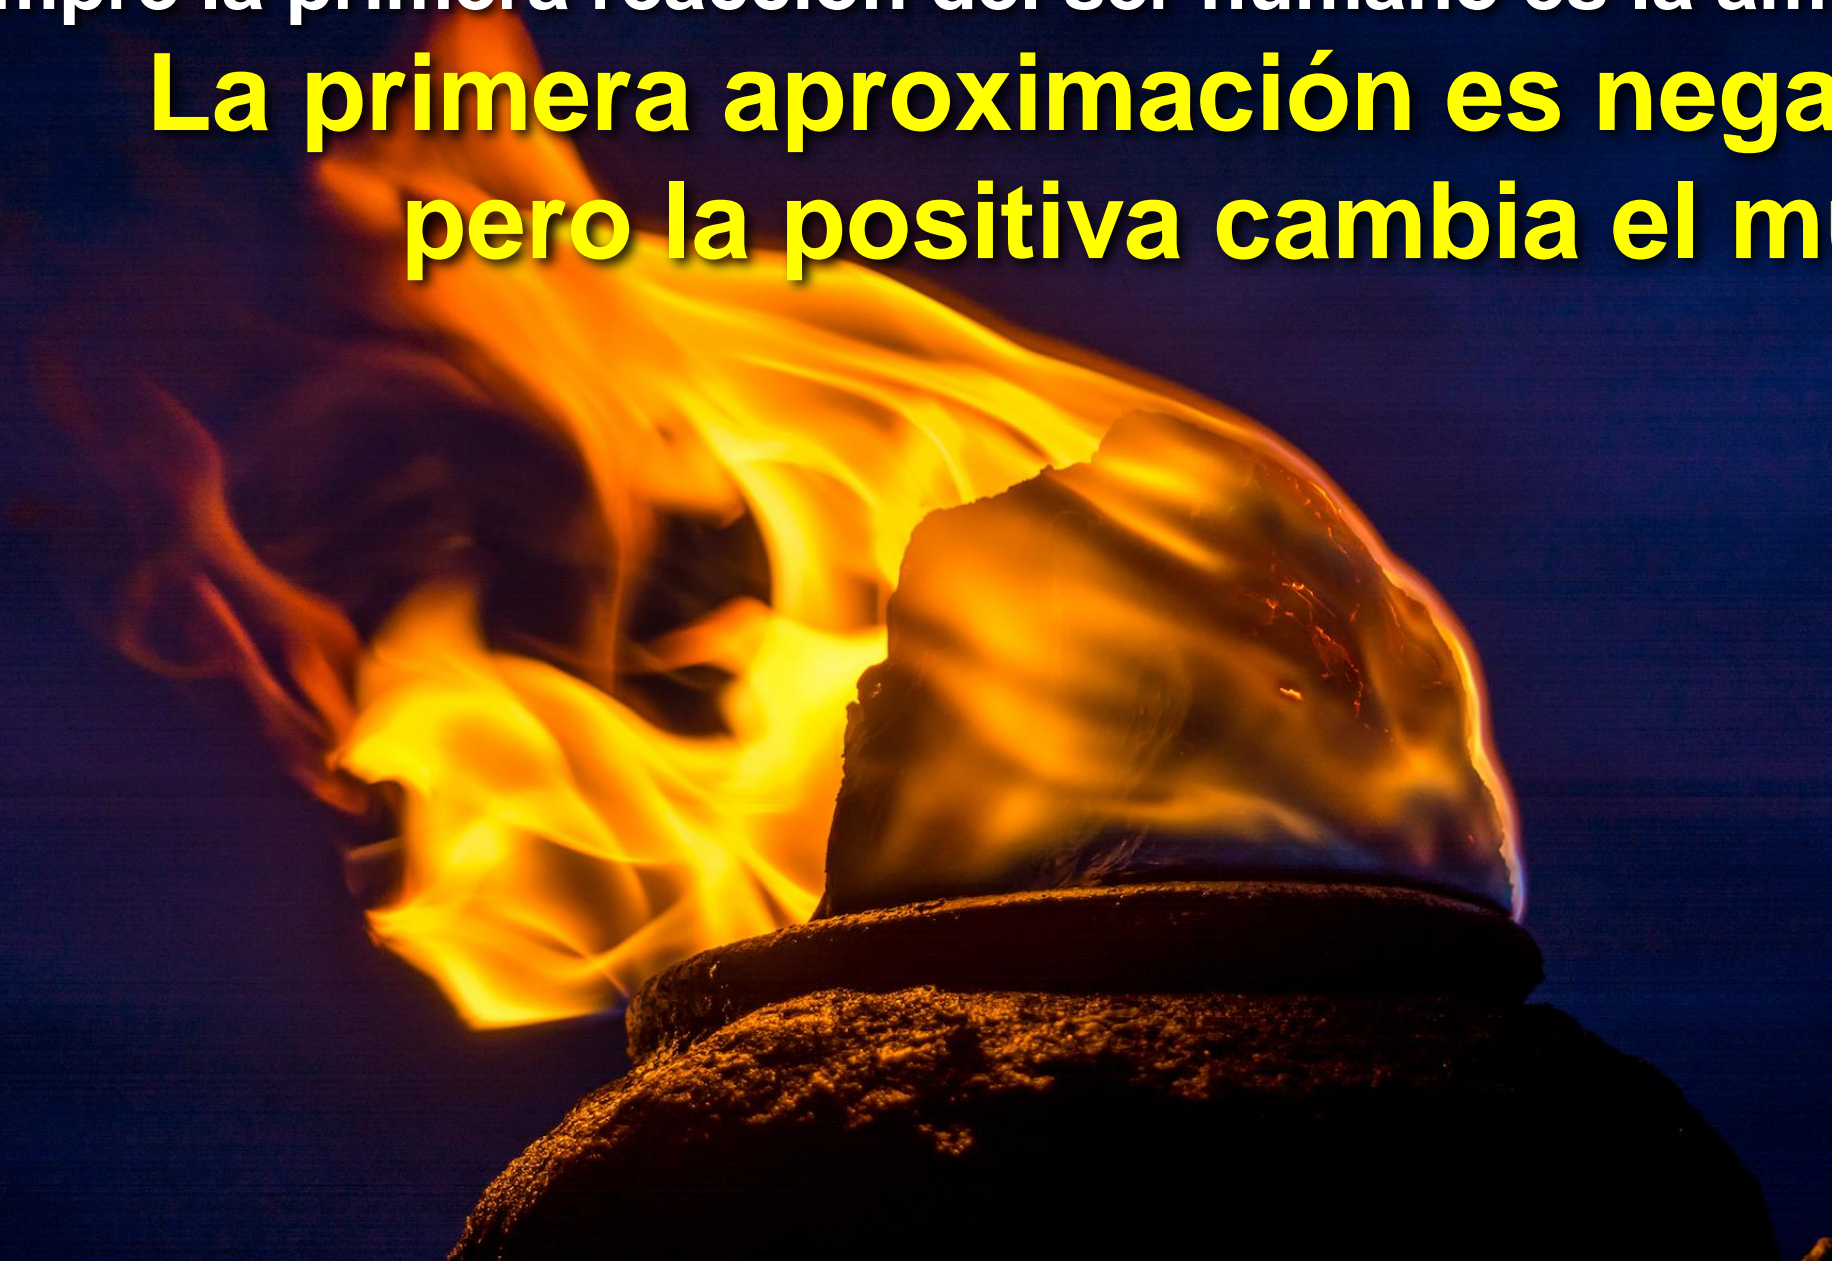

Agilidad de aplicaciones multinube

DELLTechnologies

Regreso a la **esencia humana**

La gente positiva cambia el mundo,
mientras que la negativa lo mantiene cómo está

Siempre la primera reacción del ser humano es la amenaza,
La primera aproximación es negativa,
pero la positiva cambia el mundo

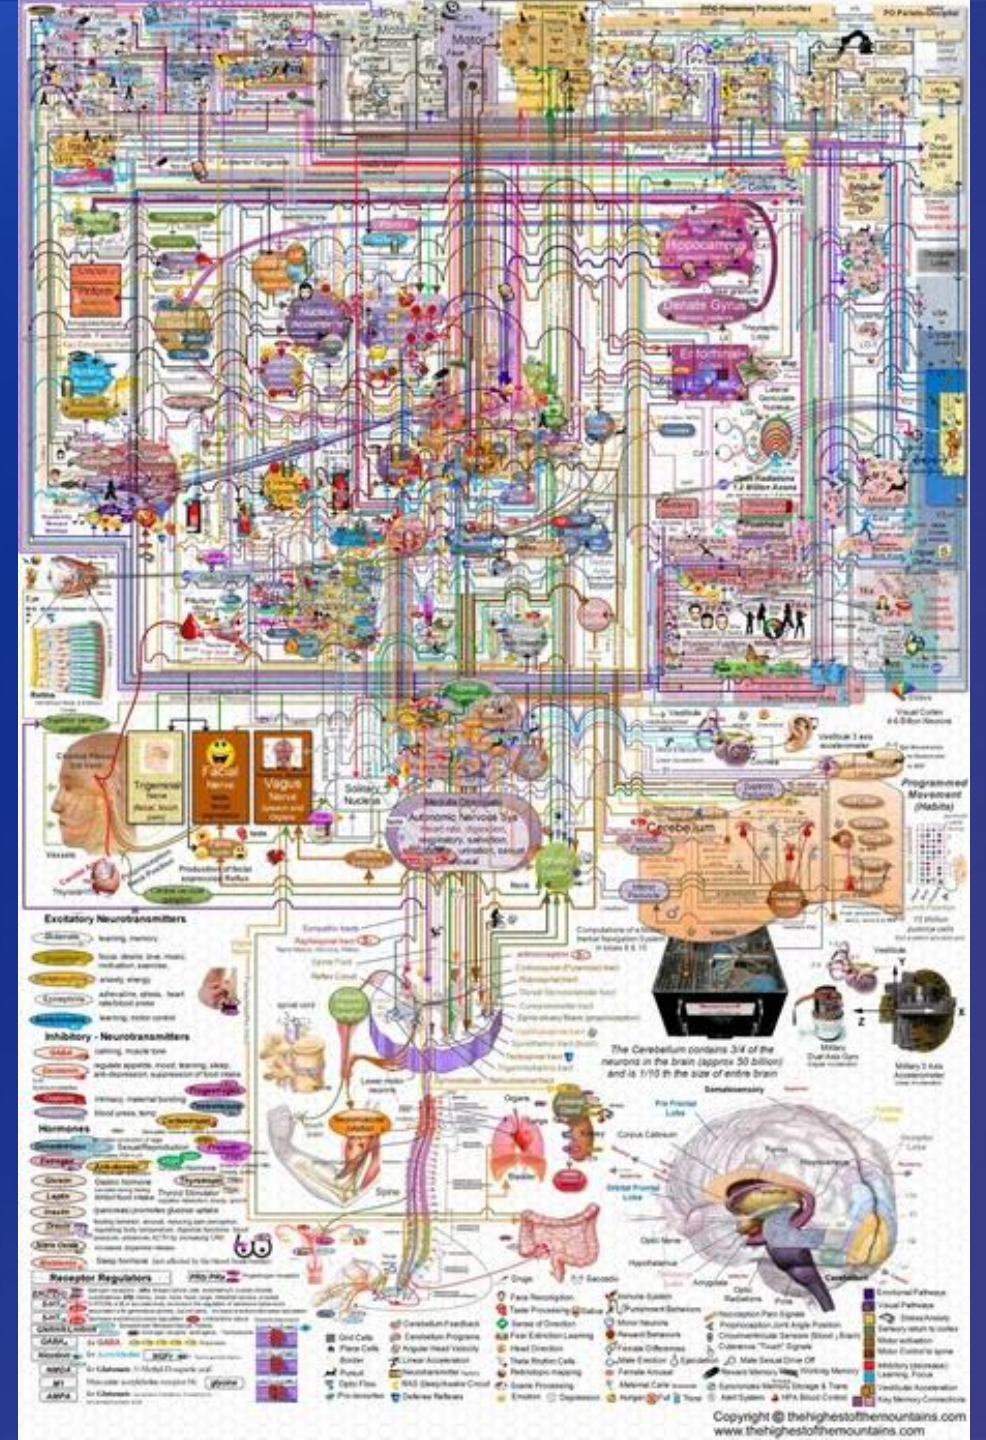

Más **Pasión**, Menos trabajo
